Project Design Phase-II Solution Requirements (Functional & Non-functional)

Date	15 October 2022
Team ID	PNT2022TMID13381
Project Name	Project – IoT based crop prodection agriculture
	system
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form
		Registration through Gmail
		Registration through LinkedIN
FR-2	User Confirmation	Confirmation via Email
		Confirmation via OTP
FR-3	User dashboard	Enter the user details
		Change the password
FR-4	User Select The category	Select Display Option click IBM ,Doctor
		constultant,Logut,Messanger

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	 This system will make the farm more productive using IoT .This research also carried out a System Usability. The session was designed to assess the User Interface usability.
NFR-2	Security	Smart agriculture can improve agricultural processes in a more productive, efficient, and sustainable way.
NFR-3	Reliability	 Most IoT devices are expected to be deployed outdoors (in fields and farms). Harsh work environments lead to the rapid degradation of IoT devices' quality and can lead to unexpected manufacturer failures.

NFR-4	Performance	 system based on machine learning performances Network performance Evaluation Design performance evaluation
NFR-5	Availability	agriculture based on the are available to estimate indoor climate, crop production, and irrigation values
NFR-6	Scalability	 Scalabilty of an internet of things platform for smart water management for agriculture
